Password and account recovery

Self-service password reset

This fictional Northstar IT manual is demonstration data for DocuAssist; it does not describe a real employer's account system.

Use the Northstar Identity Portal and choose Reset password. Verify your identity using your enrolled MFA method, then set a new password.

A password must contain at least 14 characters. Do not reuse a previously used password or share it with another person.

After resetting your password, sign out and sign back in to applications that still request the old password.

Password and account recovery

Locked accounts and unavailable MFA

If your account is locked, wait 15 minutes before trying again. Repeated attempts can extend the lockout period.

If you cannot use your enrolled MFA method, contact the IT service desk for identity verification and account recovery.

Include your employee ID and a short description of the problem in the support ticket. Never submit a password, one-time code, or recovery code.

The service desk verifies identity before changing account access. Another employee cannot request recovery on your behalf.
