Software installation guide

Requesting approved software

This fictional Northstar IT manual is demonstration data for DocuAssist. Product and process names are examples.

Install approved applications through the Northstar Software Portal. Search for the application and choose Request installation.

Paid applications require manager approval before installation. Include the business purpose and the requested license type.

Installation is performed by the managed software agent. Employees should not download unofficial installers or bypass device controls.

Software installation guide

Installation failures

If installation fails, restart the device once and retry through the Software Portal.

If the second attempt fails, open an IT ticket with the application name, device ID, installation error code, and time of failure.

A blocked application requires IT review. Do not disable endpoint protection or use a personal license to bypass the block.

Routine installation requests are priority P3 unless a wider service incident is confirmed.
